To Whom It May Concern:

In late-2009 Petro-Canada Lubricants Inc undertook a project to upgrade three carbon ½ molybdenum pressure vessels to 1 ¼ chrome ½ molybdenum material. Through a competitive bidding process Hooper Welding Enterprises Ltd was selected based on price and delivery. As Project Manager the procurement, fabrication, delivery and installation of all three vessels was under my direct supervision.

From the initial contact through the final submittal of the as-built history docket, Hooper Welding delivered quality products on budget and on time. As a result of there efficient and effective work, the insulation and fireproofing of these vessels as well as the fabrication of new platforms was added to there scope. All components of this work were executed to the satisfaction of our third party inspector and the project team.

In addition to the quality products received, Hooper Welding impressed by supporting the installation of these vessels in the field during our turnaround in October 2010. This included, but was not limited to, supporting the installation of platforms and procurement of additional loose materials that were misplaced in the field.

Since the completion of this project I have had the pleasure of working with Hooper Welding on several smaller projects and the quality of there workmanship has continued to impress. I have personally recommended Hooper Welding to other Project Manager's within the Petro-Canada Lubricants organization on several occasions.

I would recommend or use Hooper Welding's services without hesitation. Should you have any questions, please contact the undersigned at 905-403-5723 or via email at dsharpe@suncor.com.

Yours truly,

David Sharpe
