Pressure Vessels

Dear Chris:

I wanted to express our appreciation for the great job you and Hooper Welding did on the coalescer and amine contactor vessels for Oneok. It was nice to receive vessels early for a change. The contactor vessels looked awesome with the nice shiny lagging, and insulating them in the shop saved a lot of time in the field. Our fears of damage to the insulation during shipment proved unfounded.

We also appreciate the effort you personally went to work with the railroad to come up with a routing to the jobsite. Thanks for the job well done, and we look forward to working with Hooper again on future orders.

Sincerely,

Burns & McDonnell
